a Measurement pipeline
Corpus
146,785 papers, 2000–2025
Field labelling
47,834 papers; gold standard n = 200, 97%
In-corpus citation edges
922,842 edges; 607,204 rows right-censored
Four behavioural readings
outward strength / first direction / disruption / citation age
Comparison design
stable 8-venue set; 2-D strata; seven external panels
b Range and blind spots
Citation-channel resolution
0.406 (field) vs 0.151 (comparison), 2025;
disruption index monotone in reference density;
all comparisons made within strata
Temporal range
in-corpus 2000–2025; cohorts to 2020; benchmark-suite technical report outside the corpus boundary
External panels
96,170 papers across seven fields;
low-resolution outline of direction only;
cross-database readings not comparable
